

Part I: Browser and Code

```
<!-- Challenge 1: Add info about the product-->
<p> description: {{description}} </p>
<!-- Challenge 2: Bind a url to the data object then bind it to an anchor-->
<a v-bind:href="url">More products like this</a>
<p v-if="inventory > 10">In Stock</p>
<p v-else-if="inventory <= 10 && inventory > 0">Almost sold out!</p>
<!-- Challenge 3: Add an onSale boolean to the data object -->
<p v-if="onSale">On Sale!</p>
<ul>
  <li v-for="detail in details">{{ detail }}</li>
</ul>
```

Part II: Understanding

- Video 2: This video helped me understand how to spin up a simple Vue app and hook data to the page.
- Video 3: This video helped me understand how Vue connects data to HTML attributes so they can update automatically. It showed me how reactivity keeps everything in sync, meaning when the data changes, the content on the page changes too.
- Video 4: This video helped me understand how Vue can show different content depending on certain conditions. It made me see how flexible and dynamic a webpage can be when it reacts to changes in data, like showing whether something is available or not.
